

How should Q(uantum) M(echanics) be understood completely?

Because, up to this day it seems that NOBODY is able to explain QM!

However, QM can be explained completely mathematically through Albert Einstein his in 1921 already concluded fact that all descriptions of our reality (i.e. 'physics') should include gravitation, i.e. curvature of space and time on simple mathematical grounds. Einstein already described this mathematical fact in 1920, and he called it the C(omprehensive) A(ction) P(inciple). And this is just what all so-called classical 20th century QM analyses do **NOT** take into account.

This is also the reason that no-one on this world understands the mathematical reality of QM, i.e. the S(pecial) R(elativistic) Q(uantum) F(ield) T(theories). Almost 50 years people try to understand QM and describe it together with gravity using so-called Super-String theories, but this beautiful mathematical description does **NOT** explain why QM has to be used as it is always used! Only the graviton is also included in this not understood complex Hilbert-space! And this is just the reason why these so-called 2D-string theories do **NOT** explain our daily QM reality!

The fact that the graviton is a spin2 boson explains mathematically exactly all problems of QM. The fact that so-called elementary particles have to be described mathematically as 2D(imensional) extended particles to end up with a description which complies to Einstein's CAP. And the only mathematical solution for all elementary particles, i.e. the basic components of all compound structures of our reality, is **ONLY** possible with a simple mathematical description with 2D- harmonical oscillators in the 2D-plane orthogonal to the direction of motion. Describing all elementary particles this way in compliance with the CAP explains at once why all elementary particles posses energy proportional with a detected frequency. But this is of course a timelike constant and must be analyzed SR. The corresponding spacelike constant is just the non-zero spin of the elementary particle. In this way the CAP explained SR QFT explains 'SPIN' as a logical and also necessary characteristic of all elementary particles completely!

This is why, right now, I'm 100% certain that a so-called elementary '*spinless*' particle shall never be observed in any experiment ever! I.e. the IDIOTIC "Higgs" boson shall never be found in any experiment, because it's simple human fiction and not in compliance with Einstein's CAP!

The only way to understand the strange 'QM' is using a mathematical analysis in compliance with Einstein's CAP. And in this mathematical analysis it is evident that all elementary particles **MUST** be described as harmonic oscillators in the 2D-plane orthogonal to the S(pecial) R(elativistic) worldline. The frequency multiplied by 'h-bar', or Dirac's constant, i.e. Planck's constant divided by 2π just is the 'intrinsic' energy of the elementary particle. The corresponding spacelike constant just is the appearing QM 'intrinsic' angular momentum. And this is of-course nothing else but the up to this day still not understood SPIN of all elementary particles.

In principle my patience is at an end to explain simple SR QFT to our extremely **STUPID** so-called humanity. This is also the reason that I've stopped explaining my mathematical knowledge about the still not understood QM to the world. It just seems like people are just like ants and follow one another without understanding their own reality and existence! The **STUPID "HUMANITY"**, isn't worth it to understand **QM**. And if **EVER** spinless elementary particles are observed which possess energy proportional with a detected frequency, only at that moment I have to confess that I really do not understand our reality!

My view on the QM can be viewed on the website: <http://quantumuniverse.eu>
